FLYAWAY KA SATELLITE SYSTEM

THE COST-EFFECTIVE BROADCAST SOLUTION

A proven Satellite News Gathering solution, the 'FlyAway' system has been extensively field-tested by major broadcasters and government organisations.

- Manufactured to be truly robust at an affordable cost.
- The stand has been produced from high-grade stainless steel and machined alloy, designed for deployment in harsh and hostile environments.
- The Antenna Arms and Transceiver (TRIA) are designed to be quickly removed from the dish, making the assembly smaller and easy to transport in the transit case (no tools required).
- The stand is quickly dismantled and packs into two flight cases with all other modules. The case complies with 'In-Hold' weights and dimensions.
- Deployment (from unpacking to 'live') is typically less than 15 minutes.
- The standard system is delivered with the Eutelsat Solid State Transceiver (E-Tria) and Pro 2 Broadcast Modem, which offers coverage across Europe (subject to any local licence restrictions). Eutelsat have a licence which covers 100% of Western Europe and sections of North Africa & the UAE. The system can now be deployed across the USA using the Viasat Exede Satellite.
- The NewsSpotter (Eutelsat Service) delivers a maximum of 10 Mbps Uplink and 10 Mbps Downlink at 1:1 Dedicated. Also available is an 'always on' service delivering a contention service at 30 Mbps Downlink and 4 Mbps Uplink for e-mail, voice and web browsing when not broadcasting.
- The NewsSpotter Service is booked via a self-booking portal or simply via contact with our European HQ in the UK. NewsSpotter is only charged by the time and GBs transceived. The 'Always On' service is billed monthly as used, also charged by the GB. There are NO monthly fees or pre-purchase bandwidth requirements, unless additional services are demanded.

DIMENSIONS AND WEIGHTS:

Equipment case

Dimensions:
540 x 410 x 1105mm (approx)

Weight (loaded):
34.8Kg

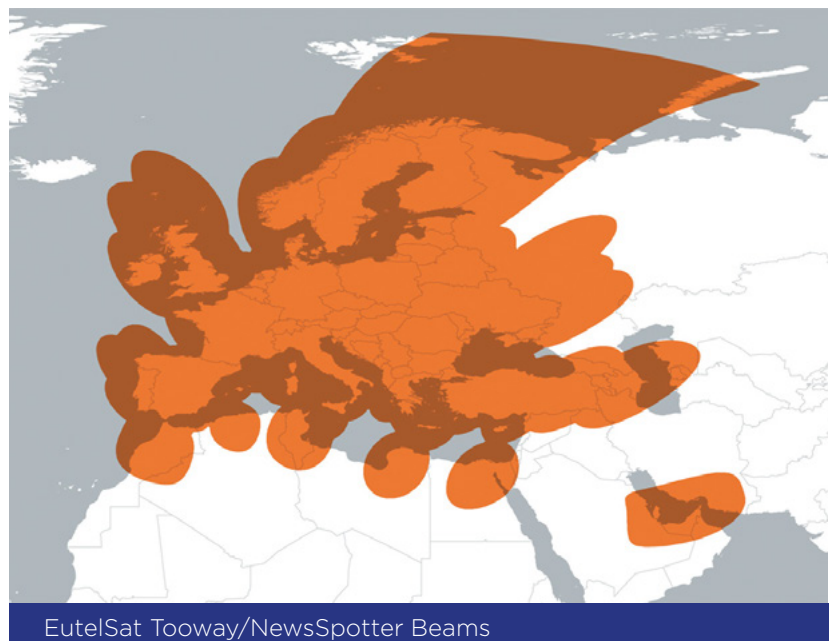

Dish / Antenna Case

Dimensions:
860 x 260 x 880mm (approx)

Weight (loaded):
24.6Kg
